

## STA414 Winter 2020 Statistical Methods in Machine Learning II

Course web site: <https://probmlcourse.github.io/sta414/>

### Overview

The language of probability allows us to coherently and automatically account for uncertainty. This course will teach you how to build, fit, and do inference in probabilistic models. These models let us generate novel images and text, find meaningful latent representations of data, take advantage of large unlabeled datasets, and even let us do analogical reasoning automatically. This course will teach the basic building blocks of these models and the computational tools needed to use them.

### Schedule

**LEC0101:** Mondays 14:10–17:00pm, in Emmanuel College, room 001. (EM 001)

**LEC5101:** Tuesdays 19:10–22:00pm, in Sidney Smith, room 2117. (SS 2117)

Topics and material for each lecture and tutorial will be found on the course web page.

### Discussion Board

TBA

### Teaching Team

#### Instructors

David Duvenaud and Jesse Bettencourt

**e-mail:** [sta414prof@cs.toronto.edu](mailto:sta414prof@cs.toronto.edu)\* **STA414 in subject**

**Office hours:** TBA

#### Teaching Assistants:

**e-mail:** [sta414tas@cs.toronto.edu](mailto:sta414tas@cs.toronto.edu)\* **STA414 in subject**

**Office hours:** TBA

\*Please consider posting questions to forum before contacting teaching team directly.  
Do NOT send us email about the class directly to our personal accounts. We will not answer.

## Marking Scheme and Tentative Assessment Schedule

- Assignment 0: 10% (Jan 24)
- Assignment 1: 13.3% (Feb 7)
- Midterm: 20% (Feb 13)
- Assignment 2: 13.3% (Mar 13)
- Assignment 3: 13.3% (Apr 3)
- Final: 30% (TBD)

## Assignments

Assignments are due by **23:59** on the due date.

**Late penalty for assignments:** 15% will be deducted from assignments each day after the due date (rounding up). Assignments won't be accepted after 48 hours after the due date.

**Communication for Special Circumstances:** If you find yourself in a situation that requires you to submit your assignment after the deadline you should inform me via email prior to the due date as soon as possible. Be preemptive. Emails explaining late assignments near or after the deadline will not be considered generously.

**Collaboration policy:** After attempting the problems on an individual basis, you may discuss and work together on the homework assignments with up to two classmates. However, you must write your own code and write up your own solutions individually and explicitly name any collaborators at the top of the homework.

**Programming Assignments:** A typical assignment will require you to write (or modify) and use some code that implements a simple version of a learning procedure that has recently been covered in the course. You will have to submit a brief report that describes the results you obtained. That report must include everything that will be assessed. So outputs from the code, like plots or values, must be included in the write-up. Markers will not be expected to run your code.

**Marking concerns:** Any requests to have marked work re-evaluated must be made in writing within one week of the date the work was returned. The request must contain a justification for consideration.

**Graduate students** will be evaluated at the graduate level according to the [University Assessment and Grading Practices Policy](#).

## Course Outline

This course covers some of the theory and methodology of statistical aspects of machine learning. The preliminary set of topics to be covered include:

- Linear methods for regression + classification
- Bayesian linear regression
- Probabilistic Generative and Discriminative models
- Regularization methods
- Stochastic Optimization and Neural Networks
- Graphical model notation and exact inference
- Mixture Models, Bayesian Networks
- Model Comparison and marginal likelihood
- Stochastic Variational Inference
- Time series and recurrent models
- Gaussian processes
- Variational Autoencoders

## Readings

There is no required textbook for the class. A few small readings may be assigned if the need arises, these will be posted on the course website. Specific chapter readings may be assigned primarily from:

- David MacKay (2003) *Information Theory, Inference, and Learning Algorithms*  
<http://www.inference.phy.cam.ac.uk/mackay/itila/>
- Kevin Murphy (2012) *Machine Learning: A Probabilistic Perspective*

## Additional help

Need extra help with the coursework? Here are some options:

- For continued class discussion and questions outside of class, try posting on the forum. The instructor and TAs will be monitoring them. However, this forum is primarily for you to discuss the topics amongst yourselves. You should not expect an answer from the teaching team for every question. In particular, we may intentionally not answer questions we believe would be beneficial for students to answer for each other. The best way to learn is to explain!
- You can visit the instructor during their office hour.
- E-mail should only be used for emergencies or personal matters.

## How to communicate with your instructor

Questions about course material such as:

- How do I do question 3.7 in the textbook?
- What is standard deviation?
- When is the midterm?

should be posted on the forum discussion forum.

For private communication, such as I missed the test because I was ill, e-mail your instructor. Use your utoronto.ca e-mail account to ensure that your message doesn't automatically go to a Junk folder and include your full name and student number.

## Academic integrity

You are responsible for knowing the content of the [University of Toronto's Code of Behaviour on Academic Matters](#). If you have any questions about what is or is not permitted in this course, please do not hesitate to contact your instructor.

## Accessibility needs

The University of Toronto is committed to accessibility. If you require accommodations for a disability, or have any accessibility concerns about the course, the classroom, or course materials, please contact Accessibility Services as soon as possible: [accessibility.services@utoronto.ca](mailto:accessibility.services@utoronto.ca) or <http://accessibility.utoronto.ca>.
