STA475: Survival Analysis

Course Instructor

Course Instructor: Nathalie Moon
How do you pronounce that?
• Nathalie: the “h” is silent; Moon: like the English word!

Preferred pronouns: she/her
Virtual class meetings:  Tuesday 2:10 - 3pm
                    Thursday 2:10 - 4pm
Virtual drop-in hours: Will be held virtually on Zoom, day/time TBA
Email: sta475@utoronto.ca (note that this email will only monitored during the semester)

Course materials and delivery

Course webpage: All materials will be posted on Quercus (https://q.utoronto.ca). Course materials provided on Quercus are for the use of students currently enrolled in the course only. All course materials are copyrighted; the copyright for textbook materials belongs to the textbook publisher, while the copyright for materials provided by the instructor belongs to the instructor. Distributing course materials (including course notes, assignments, etc) to anyone outside the course is considered unauthorized use and may constitute an academic offense.

Course delivery: All class meetings will be held online via Zoom. I intend to post the recordings on Quercus after class, but recordings are not guaranteed in the event of technical errors. There will be two mandatory in-person assessments, to be held during the Thursday class time on the dates indicated in the syllabus. Class meetings will include a combination of 1) the instructor presenting new course material and 2) students working on worksheets in small groups to explore new topics, and 3) full class discussions.

Emergency circumstances: Some weeks, there may be circumstances outside my control which lead to changes to the standard course delivery format (e.g., asynchronous materials may be provided if a synchronous class meeting cannot be held as planned). If this arises, I will post an announcement on Quercus as early as possible to notify you.

Course Information

An overview of theory and methods in the analysis of survival data. Topics include survival distributions and their applications, parametric and non-parametric methods, proportional hazards regression, and extensions to competing risks and multistate modelling. More specifically, we this course will cover:

1. Introduction to Survival Analysis
2. Univariate Parametric Survival Models
3. Non-parametric Survival Models
4. Comparing Survival Distributions
5. Parametric Regression
6. Semi-parametric Regression

Recommended Reference books (not required, but available electronically through the library): Survival Analysis: Techniques for Censored and Truncated Data by John P Klein and Melvin L Moeschberger
Learning objectives

By the end of the course, you should be able to:

1. Describe the features of time to event data and why standard statistical methods are not adequate to analyze these data.
2. Conduct statistical analyses of time-to-event data, including variable selection, inference, interpretation, and assessment of model fit.
3. Compare the advantages and disadvantages of non-parametric, parametric, and semi-parametric methods for analysing time-to-event data to make informed modeling decisions.
4. Reflect on and understand the limitations of methods to analyze time-to-event data.

Fostering a safe classroom environment

If you are feeling unwell, do NOT attend in-person assessments (refer to the Missed/late Submission Policy section of this syllabus for details on what to do if this occurs). As a class community, we are all accountable to each other to maintain a safe classroom environment for everyone. Even if you live alone and/or feel you are not at high risk of severe illness, remember that some of your peers may themselves be at high risk or living with individuals who are. Let’s all do our part to keep each other safe.

How will your success be measured?

*Dates are tentative, but unlikely to change.*

Class meetings and virtual drop-in hours

All class meetings (Tuesdays and Thursdays) will be held online synchronously on Zoom. You must log in to Zoom with your UofT (University of Toronto) credentials to join the class meetings. You will find the link to join the Zoom sessions on the course homepage on Quercus, in the menu on the left of the page.

There will also be virtual drop-in hours (aka office hours) in addition to our scheduled class times. Please complete the “Help me get to know you” survey on Quercus as soon as possible to help me to determine what times work best for you. Virtual drop-in hours will be held online via Zoom.
Expectations for students

This class may be smaller than many of your other STA classes. My intention is to make our class meetings a welcoming space for everyone to learn, exchange ideas, and engage with each other. I strongly encourage you to participate in the class meetings by asking questions through chat or by raising your hand, responding to questions, and turning on your camera if you are comfortable doing so. This will make it easier for me to get to know you (which is key for potential reference requests down the road!) and make the experience more engaging for everyone. I realize that some of you may be tuning in to class from public spaces on or off campus which may make engaging via video/microphone more challenging — if this is the case, consider attending weekly virtual drop-in hours to introduce yourself, meet fellow classmates, and discuss course material in a more casual setting.

Coursework

Ticket out the door
Each week, you will complete a short “ticket out the door” questionnaire on Quercus; due on Fridays starting on September 9th. You can submit responses as many times as you like before the deadline, but only the last submission will be considered. To get full credit on your ticket out the door survey, you must provide meaningful answers to the open-ended questions, but there is no right or wrong answer. This should not take you long to do, just 5-10 minutes to reflect back on the material covered that week. However, saying “Nothing” or “Everything” is not enough to get credit!

Your overall “Ticket out the door” grade will be based on your best 8 submissions out of 12 weeks.

Reflections
Over the course of the term, you will write three reflections. In the first two, you will reflect on your goals for the course, look back on your progress, and outline a strategy for achieving your goals. In the final reflection, you will reflect on the advanced survival analysis topics presented after the second term test. More details about each reflection will be provided at least 10 days before each deadline.

Assignments
You will receive each assignment at least 10 days before the due date and are encouraged to start working on it early. While you may discuss course content with your classmates, you must complete assignments on your own. It is an academic offence to submit another person’s work as your own, and infractions will be reported and investigated.

Term tests
While class meetings will be held virtually on Zoom, there will be two in-person term tests, held during class time on Thursdays; see section titled “How will your success be measured” for exact dates. The locations will be shared with you in class and on Quercus as soon as they become available.

Missed/late Submission Policies

Reflections
If personal circumstances prevent you from submitting a reflection assignment by the suggested deadline, you may submit it on Quercus at a later date with no penalty, up to the FINAL deadlines below. Because of this, the firm FINAL deadlines for the reflections are:
- Learning objectives reflection: Thurs Oct 27, 2022
- Mid-semester check-in reflection: Thurs Dec 1, 2022
- Advanced topics reflection: Tues Dec 6, 2022

No submissions will be accepted after the following firm deadlines for any reason.

Assignments
If personal circumstances prevent you from submitting an assignment by the Friday deadline (see due dates in the “How will your success be measured” section of the syllabus), you have until the following Monday at 4:59pm ET to submit it, with no penalty. As solutions will be released on Mondays after 5pm, no submissions will be accepted after this point.

If your personal circumstances are such that you cannot submit your assignment by the Monday, you must submit this form by that day (that is, by the Monday immediately following the Friday deadline) with an attestation of illness or personal emergency. I will NOT be asking you for a doctor’s note. By completing this form by the deadline, you may shift the weight of at most ONE of the three assignments to the other two assignments. If you are unable to submit two or more assignments, you will only be able to shift the weight of one of them to the other assignments.

Ticket out the door
You must complete at least 8 of 12 tickets out the door surveys to get full credit for this item. Because of this, no submissions will be accepted after the weekly deadline.

Term Tests (1 and 2)
If personal circumstances prevent you from writing a term test on the scheduled date, submit this form within 72 hours of the missed test with an attestation of illness or personal emergency. I will NOT be asking you for a doctor’s note. After this form closes, you will receive information about an alternative assessment (which may be an in-person test or an oral exam, at the discretion of the instructor).

Marking concerns
Assignments, term test, and reflections
If you believe there has been an error in the grading of your assignment, you must complete the re-grade request form (links will be posted on Quercus) for each relevant question within one week of the grades being posted; your request will be reviewed by the course instructor, in consultation with the TA (Teaching Assistant) who graded your work, as appropriate). To complete your request, you must include:

- your name and student number,
- a detailed written justification for your request (it is not enough to simply say that you believe your work deserves higher credit)

Please note that we reserve the right to review the grading of your entire submission when you re-submit an assessment for reconsideration (i.e., your grade could go down).

Help me catch typos in course materials
If you think you find an error in any course materials (e.g., course notes, Quercus page, assignment, etc.), please do the following:
1. Check the course’s Errata page on Quercus to see if it is already listed.
2. If it is not yet listed, submit a description of your typo via the following form.
3. The first person to submit each confirmed error will get 0.2% bonus on their final course grade, up to a maximum of 1% per student.

Computing

We will use R, the RStudio IDE, and R notebooks. You will need to install R first, and then RStudio. R can be downloaded for free from http://cran.r-project.org. RStudio can be downloaded for free from http://www.rstudio.com/products/rstudio/download/. If you already have these installed, make sure to update to current versions (R version >= 4.0.0, RStudio 2022.07.1+554 or more recent).

You can also use the University of Toronto’s JupyterHub (https://jupyter.utoronto.ca) to access RStudio through your Internet browser (this requires an internet connection).

Communication

Course communication policy:

- **Piazza forum**: Questions about course content and course logistics should be posted on our Piazza forum, which you can access from the menu on the left of the Quercus page.

- **Email**: Questions relating to your personal circumstances should be sent to sta475@utoronto.ca by email. General questions about course content or course logistics will not be answered by email and will be referred to Piazza instead. Please send emails when it is convenient for you to do so, but expect responses within 1-2 business days (Monday to Friday), from 9am to 5pm ET.

- **MS Forms**:
  - Typo submissions must be submitted via the appropriate form, to be considered for bonus credit.
  - Regrade requests will only be considered if submitted via the appropriate form, within one week of the grades being posted. Email requests will not be considered.
  - Notification of illness (for missed assignments or tests) will only be considered if submitted via the appropriate form, by the required deadline (see Missed Work section of the syllabus for more details).

Minimal technical requirements

All students should consult the minimum technical requirements for participation in online learning. If you are facing financial barriers to obtaining the required technology, please contact your College Registrar’s Office to obtain information regarding your potential eligibility for a need-based bursary.

Accessibility

The University of Toronto is committed to accessibility. If you require accommodations for a disability, or have any accessibility concerns about the course, the classroom, or course materials, please contact Accessibility Services as soon as possible: email accessibility.services@utoronto.ca or visit the website at http://accessibility.utoronto.ca
If you have an accommodation letter from your accessibility advisor that is relevant to this course, please do the following:

- Email your letter to sta475@utoronto.ca with “Accommodation letter” as part of the email subject, cc (carbon copy) your advisor and let us know anything else you wish us to know/any questions you have. Please do this as soon as possible after you enrol in the course/receive this syllabus.
- Confirm any accommodations for each specific assessment at least 1 week before the assessment / due date.

Academic integrity

Academic integrity is fundamental to learning and scholarship at the University of Toronto. Participating honestly, respectfully, responsibly, and fairly in this academic community ensures that the University of Toronto degree that you earn will be valued as a true indication of your individual academic achievement and will continue to receive the respect and recognition it deserves.

Plagiarism

In this course you may be at risk of plagiarising if you do not understand the rules and your responsibilities. You must not present the work of others as your own. This includes, but is certainly not limited to, copying text and including it in your writing without a citation and quotation marks.

There are many resources to help you learn more:

- [https://guides.library.utoronto.ca/plagiarism](https://guides.library.utoronto.ca/plagiarism)

Intellectual property statement

Course material that has been created by your instructor (i.e., lecture slides, term test questions/solutions and any other course material and resources made available to you on Quercus) is the intellectual property of your instructors and is made available to you for your personal use in this course. Sharing, posting, selling or using this material outside of your personal use in this course is not permitted under any circumstances and is considered an infringement of intellectual property rights.

While recordings of class meetings will be made available to you on the course website, these are intended only for students registered in the course. You are not authorized to copy these materials or distribute them to individuals who are not registered in the course. If you would like to record any course activities in this course, you MUST ask permission from your instructor in advance. According to intellectual property laws, not asking permission constitutes stealing.
